CHAMELEON: A LARGE-SCALE, RECONFIGURABLE EXPERIMENTAL ENVIRONMENT FOR CLOUD RESEARCH

Principal Investigator: Kate Keahey

Co-PIs: J. Mambretti, D.K. Panda, P. Rad, W. Smith, D. Stanzione

ON*VECTOR

*February 25-26, 2015,
San Diego, CA*

FEBRUARY 26, 2015

I

WHY AN EXPERIMENTAL TESTBED?

*“Beware of bugs in the above code;
I have only proved it correct, not tried it”*
(Donald Knuth)

*“In theory there is no difference between
theory and practice. In practice there is.”*
(Yogi Berra)

CLOUD COMPUTING RESEARCH

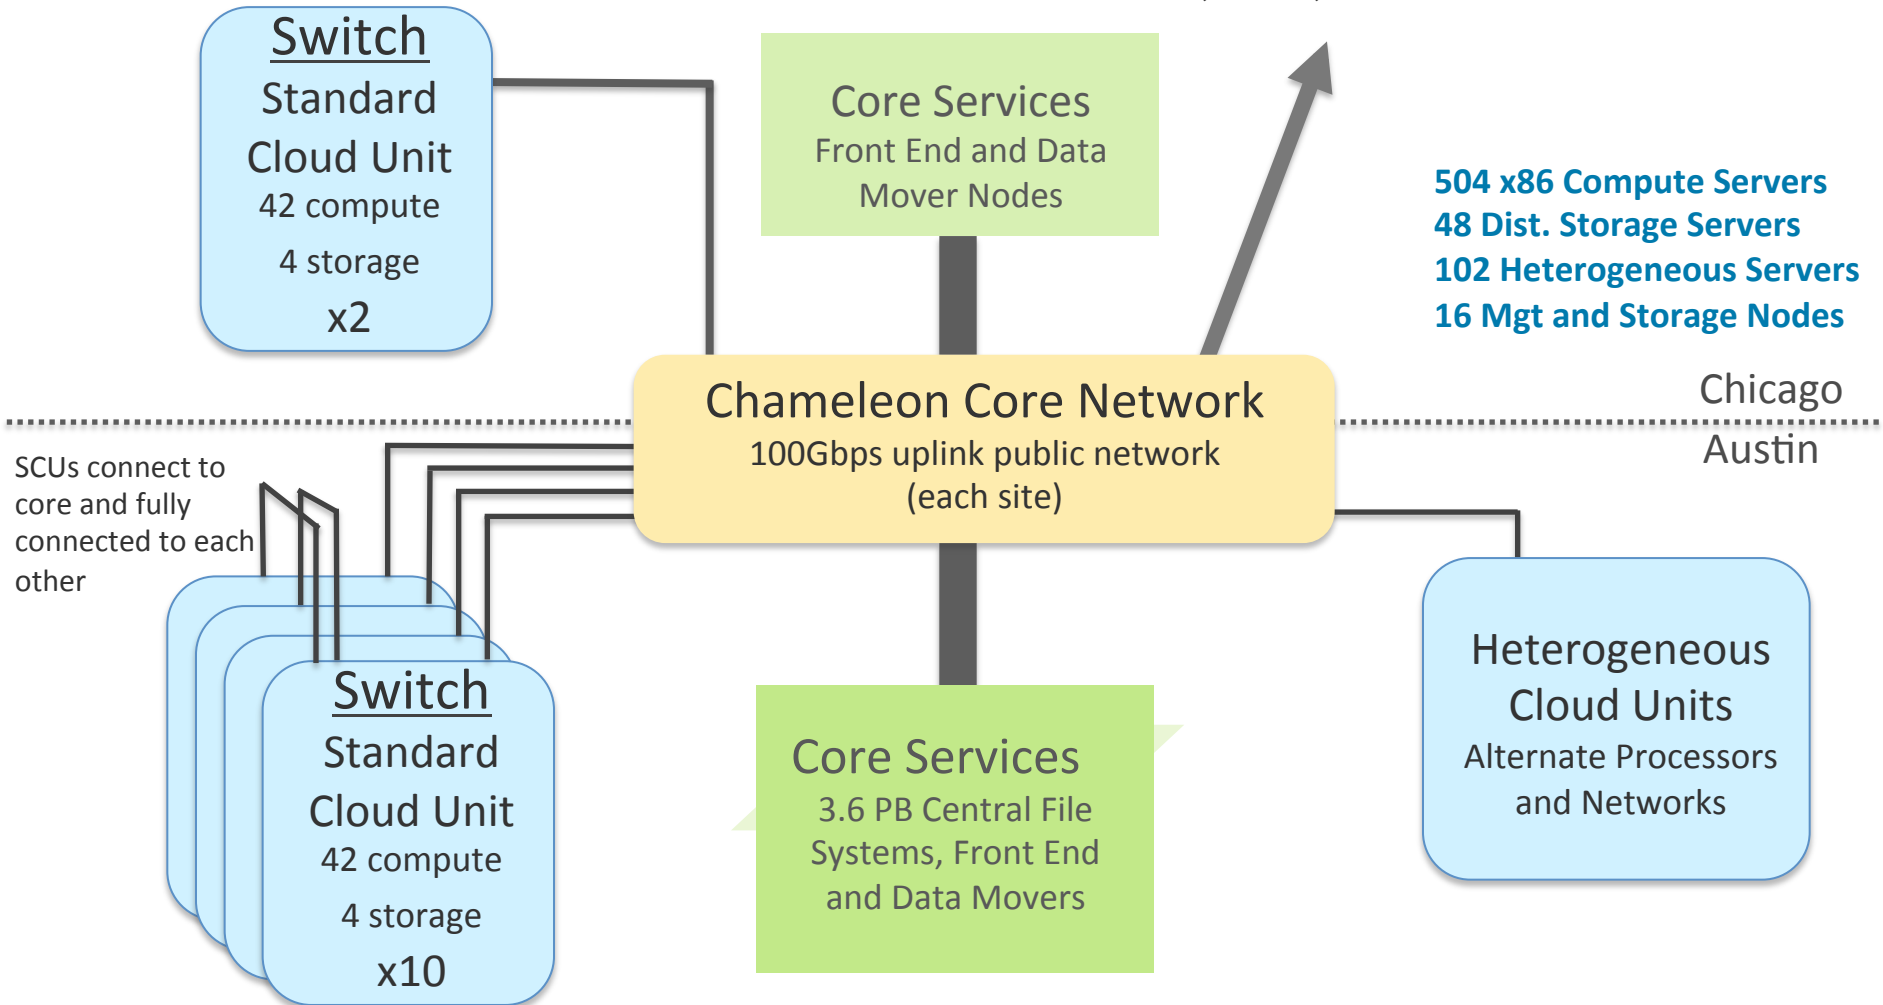

CHAMELEON: A FLEXIBLE AND POWERFUL EXPERIMENTAL INSTRUMENT

- ▶ **Large-scale:** “As large as we can afford”
 - ▶ ~650 nodes (~14,500 cores), 5 PB disk over two sites, 2 sites connected with 100G network
- ▶ **Reconfigurable:** “As close as possible to having it in your lab”
 - ▶ Bare metal reconfiguration, single instrument, Chameleon appliances
 - ▶ Support for repeatable and reproducible experiments
- ▶ **Connected:** “One stop shopping for experimental needs”
 - ▶ Workload and Trace Archive
 - ▶ Partnerships with production clouds: CERN, OSDC, Rackspace, Google, and others
 - ▶ Partnerships with users
- ▶ **Complementary:** “Can’t do everything ourselves”
 - ▶ Complementing GENI, Grid’5000, and other experimental testbeds

CHAMELEON HARDWARE

To UTSA, GENI, Future Partners

CAPABILITIES AND SUPPORTED RESEARCH

Development of new models, algorithms, platforms, auto-scaling HA, etc., innovative application and educational uses

Persistent, reliable, shared clouds

Repeatable experiments in new models, algorithms, platforms, auto-scaling, high-availability, cloud federation, etc.

Isolated partition, Chameleon Appliances

Virtualization technology (e.g., SR-IOV, accelerators), systems, networking, infrastructure-level resource management, etc.

Isolated partition, full bare metal reconfiguration

SOFTWARE: CORE CAPABILITIES

Persistent Clouds
(OpenStack)

Persistent Cloud

User Clouds

Chameleon Appliance Catalog

A library of generic, special-purpose, and educational environments

Discovery, Provisioning, Configuration, and Monitoring

Testbed representation and discovery (Grid'5000)
Nova/Blazar, Ironic, Neutron, Ceilometer
(OpenStack, Rackspace OnMetal)

EXPERIMENTAL WORKFLOW

SELECTING AND VERIFYING RESOURCES

- ▶ Complete, fine-grained and up-to-date representation
 - ▶ Machine parsable, enables match making
 - ▶ Versioned
 - ▶ “What was the drive on the nodes I used 6 months ago?”
 - ▶ Dynamically Verifiable
 - ▶ Does reality correspond to description? (e.g., failures)
-
- ▶ Grid’5000 Registry
 - ▶ Automated resource description, automated export to RM
 - ▶ G5K-checks
 - ▶ Run at boot, acquire information, compare with resource catalog description

PROVISIONING RESOURCES

- ▶ Resource leases
- ▶ Allocating a range of resources
 - ▶ Different node types, switches, etc.
- ▶ Multiple environments in one lease
- ▶ Advance reservations (AR)
 - ▶ Sharing resources across time
- ▶ Eventually: match making, Gantt chart displays

-
- ▶ OpenStack Nova/Blazar
 - ▶ Extensions to support working with more resources, match making, and displays

CONFIGURE AND INTERACT

- ▶ Map multiple appliances to a lease
- ▶ Allow deep reconfiguration (incl. BIOS)
- ▶ Snapshotting
- ▶ Efficient appliance deployment
- ▶ Handle complex appliances
 - ▶ Virtual clusters, cloud installations, etc.
- ▶ Interact: reboot, power on/off, access to console
- ▶ Shape experimental conditions

-
- ▶ OpenStack Ironic, Glance, and meta-data servers

MONITORING

- ▶ Enables users to understand what happens during the experiment
- ▶ Types of monitoring
 - ▶ User resource monitoring
 - ▶ Infrastructure monitoring (e.g., PDUs)
 - ▶ Custom user metrics
- ▶ High-resolution metrics
- ▶ Easily export data for specific experiments

-
- ▶ OpenStack Ceilometer

REACHING OUT

- ▶ Federation: GENI, Grid'5000, and other testbeds
- ▶ Education
 - ▶ Courses with new content, multi-media, CH appliances
 - ▶ Reaching out to the MSI network
 - ▶ General education and training (MOOCs, etc.)
- ▶ Industry
 - ▶ Industry Board: synergy between industry and academia
 - ▶ Industry-sponsored research projects
- ▶ Advisory bodies: science and industry boards
- ▶ Early User Program
- ▶ Annual Chameleon Workshop

PROJECT SCHEDULE

- ▶ Fall 2014: FutureGrid@Chameleon is ready!
- ▶ Spring 2015: Initial bare metal reconfiguration capabilities available on FutureGrid UC&TACC resources for Early Users
- ▶ Summer 2015: New hardware: large-scale homogenous partitions available to Early Users
- ▶ Fall 2015: Large-scale homogenous partitions and bare metal reconfiguration generally available
- ▶ 2015/2016: Refinements to experiment management capabilities, higher level capabilities
- ▶ Fall 2016: Heterogeneous hardware available

TEAM

Kate Keahey
Chameleon PI
Science Director,
Software Development

Paul Rad
Industry Liason

Joe Mambretti
Programmable networks

Warren Smith
Director of Operations

DK Panda
High-performance
networks

Dan Stanzone
Facilities Director

THE TESTBED IS THERE – JUST ADD RESEARCH!

- ▶ Large-scale, responsive experimental testbed
 - ▶ Targeting critical research problems at scale
- ▶ Reconfigurable environment
 - ▶ Support use cases from bare metal to production clouds
- ▶ One-stop shopping for experimental needs
 - ▶ Trace and Workload Archive
- ▶ Engage the community
 - ▶ *The most important element of any experimental testbed is users and the research they work on*
