*May 9, 2019*

*Barcelona Supercomputing Center seminar*

SEPTEMBER 17, 2019

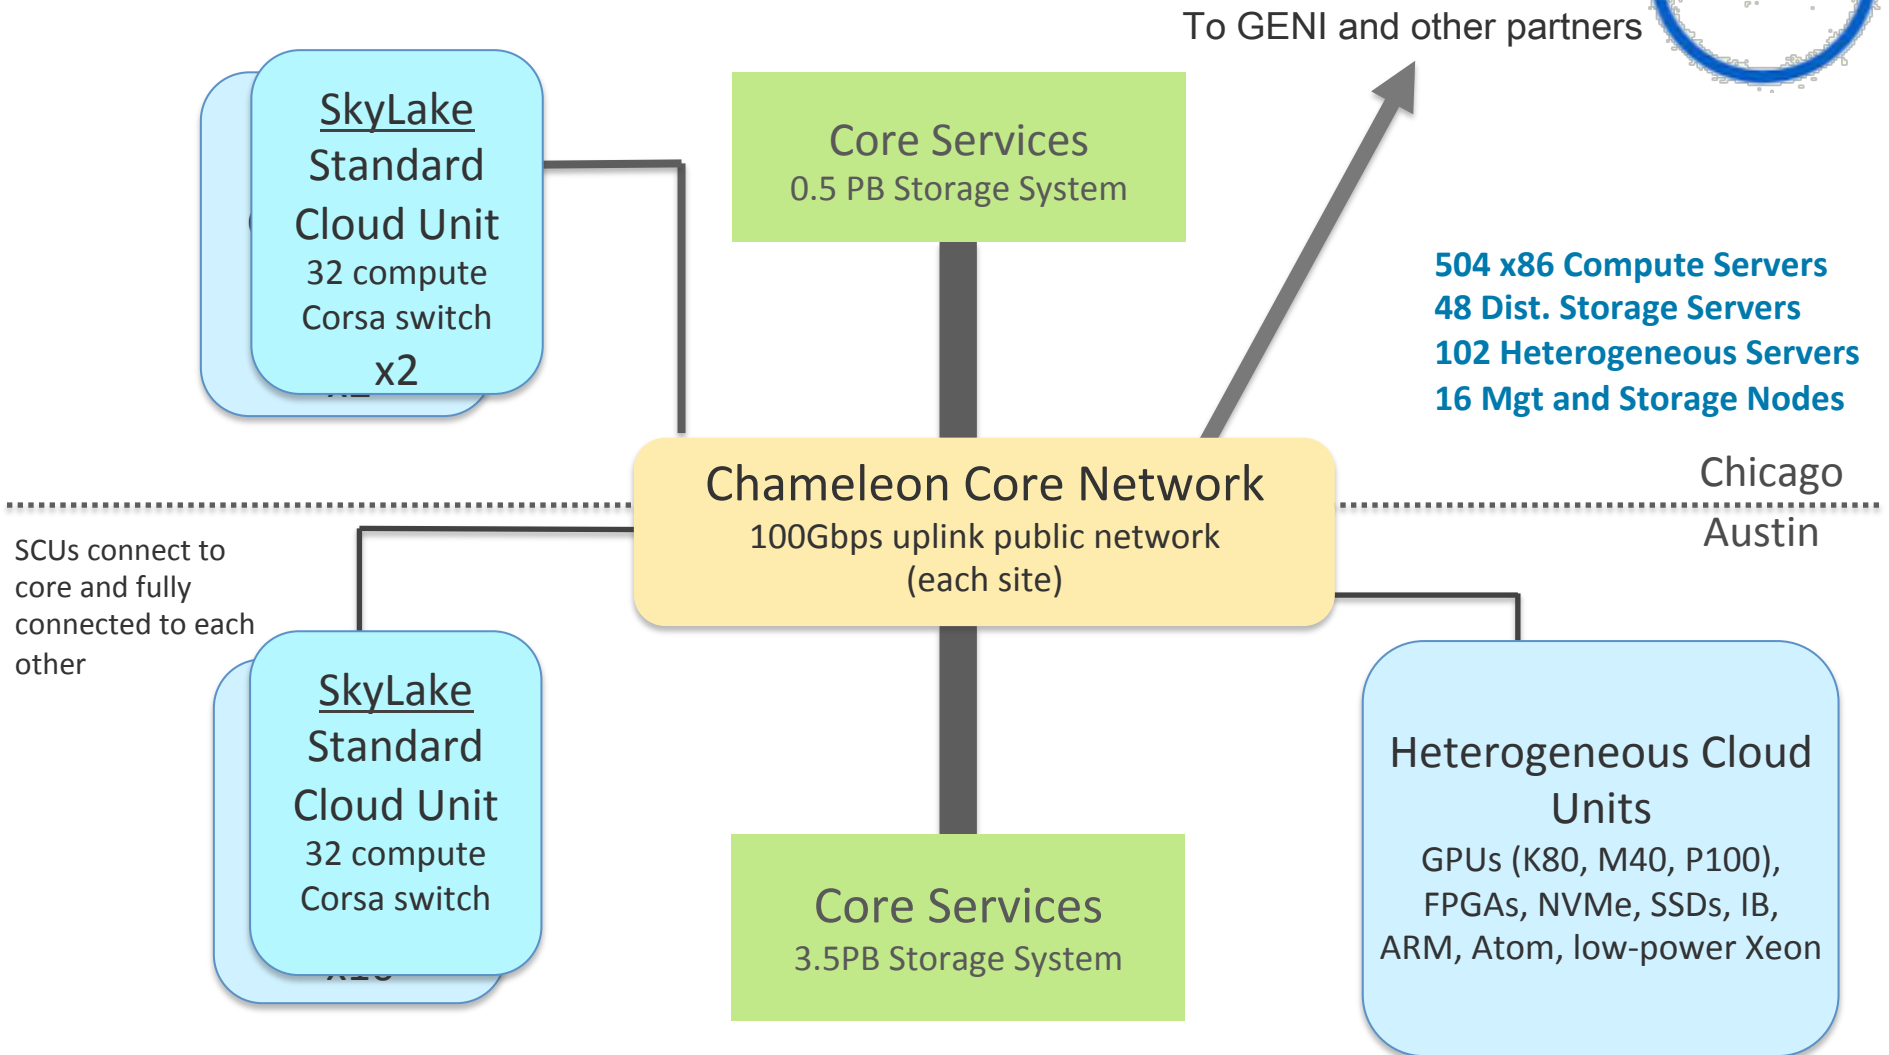

I

# CHAMELEON IN A NUTSHELL

- ▶ **Deeply reconfigurable:** “As close as possible to having it in your lab”
  - ▶ Deep reconfigurability (bare metal) and isolation
  - ▶ Power on/off, reboot from custom kernel, serial console access, etc.
  - ▶ But also – modest KVM cloud for ease of use
- ▶ **Combining large-scale and diversity:** “Big Data, Big Compute research”
  - ▶ **Large-scale:** ~large homogenous partition (~15,000 cores), 5 PB of storage distributed over 2 sites connected with 100G network...
  - ▶ ...and **diverse:** ARMs, Atoms, FPGAs, GPUs, Corsica switches, etc.
  - ▶ **Coming soon:** more storage, more accelerators
- ▶ Blueprint for a **sustainable** production testbed: “cost-effective to deploy, operate, and enhance”
  - ▶ Powered by OpenStack with bare metal reconfiguration (Ironic)
  - ▶ Chameleon team contribution recognized as official OpenStack component
- ▶ **Open, collaborative, production** testbed for **Computer Science Research**
  - ▶ Started in 10/2014, testbed available since 07/2015, renewed in 10/2017
  - ▶ Currently 3,000+ users, 450+ projects, 100+ institutions

# CHAMELEON HARDWARE

# CHAMELEON HARDWARE (DETAILS)

- ▶ “Start with large-scale homogenous partition”
  - ▶ 12 Haswell Standard Cloud Units (48 node racks), each with 42 Dell R630 compute servers with dual-socket Intel Haswell processors (24 cores) and 128GB RAM and 4 Dell FX2 storage servers with 16 2TB drives each; Force10 s6000 OpenFlow-enabled switches 10Gb to hosts, 40Gb uplinks to Chameleon core network
  - ▶ 2 SkyLake Standard Cloud Units (32 node racks); Corsa (DP2400 & DP2200) switches, 100Gb uplinks to Chameleon core network
  - ▶ Allocations can be an entire rack, multiple racks, nodes within a single rack or across racks (e.g., storage servers across racks forming a Hadoop cluster)
- ▶ Shared infrastructure
  - ▶ 3.6 + 0.5 PB global storage, 100Gb Internet connection between sites
- ▶ “Graft on heterogeneous features”
  - ▶ Infiniband with SR-IOV support, High-mem, NVMe, SSDs, GPUs (22 nodes), FPGAs (4 nodes)
  - ▶ ARM microservers (24) and Atom microservers (8), low-power Xeons (8)
- ▶ Coming soon: more nodes (CascadeLake), and more accelerators

# NEWEST CAPABILITIES

- ▶ Networking:
  - ▶ **Multi-tenant networking** allows users to provision isolated L2 VLANs and manage their own IP address space (since Fall 2017)
  - ▶ **Stitching** dynamic VLANs from Chameleon to external partners (ExoGENI, ScienceDMZs) (since Fall 2017)
  - ▶ VLANs + AL2S connection between UC and TACC for **100G experiments** (since Spring 2018)
  - ▶ **BYOC– Bring Your Own Controller**: isolated user controlled virtual OpenFlow switches (since Summer 2018)
- ▶ And many others: new lease management features, multi-region configuration, power consumption metrics, whole disk image boot for ARM nodes, serial console access, appliances, upgrades, usability improvements, etc.

# VIRTUALIZATION OR CONTAINERIZATION?

- ▶ Yuyu Zhou, University of Pittsburgh
- ▶ Research: lightweight virtualization
- ▶ Testbed requirements:
  - ▶ Bare metal reconfiguration, isolation, and serial console access
  - ▶ The ability to “save your work”
  - ▶ Support for large scale experiments
  - ▶ Up-to-date hardware

SC15 Poster: “Comparison of Virtualization and Containerization Techniques for HPC”

# EXASCALE OPERATING SYSTEMS

- ▶ Swann Perarnau, ANL
- ▶ Research: exascale operating systems
- ▶ Testbed requirements:
  - ▶ Bare metal reconfiguration
  - ▶ Boot from custom kernel with different kernel parameters
  - ▶ Fast reconfiguration, many different images, kernels, params
  - ▶ Hardware: accurate information and control over changes, performance counters, many cores
  - ▶ Access to same infrastructure for multiple collaborators

*HPPAC'16 paper: "Systemwide Power Management with Argo"*

# CLASSIFYING CYBERSECURITY ATTACKS

- ▶ Jessie Walker & team, University of Arkansas at Pine Bluff (UAPB)
- ▶ Research: modeling and visualizing multi-stage intrusion attacks (MAS)
- ▶ Testbed requirements:
  - ▶ Easy to use OpenStack installation
  - ▶ A selection of pre-configured images
  - ▶ Access to the same infrastructure for multiple collaborators

# CREATING DYNAMIC SUPERFACILITIES

- ▶ NSF CICI SAFE, Paul Ruth, RENCI-UNC Chapel Hill
- ▶ Creating trusted facilities
  - ▶ Automating trusted facility creation
  - ▶ Virtual Software Defined Exchange (SDX)
  - ▶ Secure Authorization for Federated Environments (SAFE)
- ▶ Testbed requirements
  - ▶ Creation of dynamic VLANs and wide-area circuits
  - ▶ Support for slices and network stitching
  - ▶ Managing complex deployments

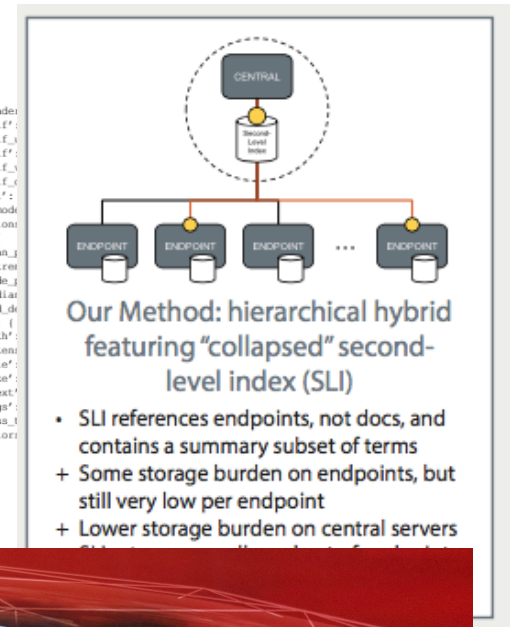

# DATA SCIENCE RESEARCH

- ▶ ACM Student Research Competition semi-finalists:
  - ▶ Blue Keleher, University of Maryland
  - ▶ Emily Herron, Mercer University
- ▶ Searching and image extraction in research repositories
- ▶ Testbed requirements:
  - ▶ Access to distributed storage in various configurations
  - ▶ State of the art GPUs
  - ▶ Easy to use appliances and complex deployments

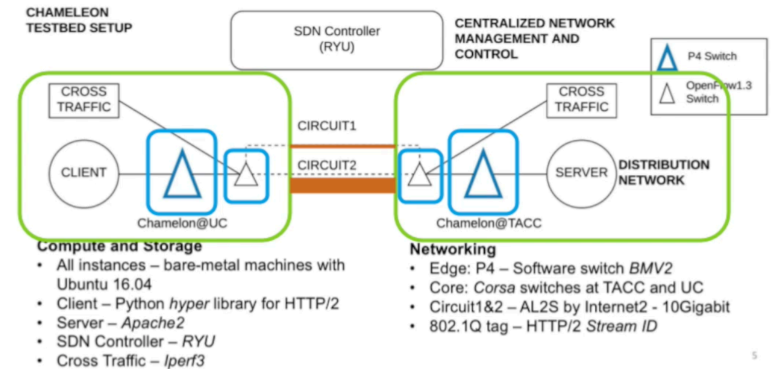

```
{ 'header': { 'header': { 'jfile': '...', 'oxif': '...', 'jfile': '...', 'jfile': '...', 'dpi': '...', 'image_mode': '...', 'dimension': '...' }, 'color': { 'mean_j': '...', 'extrem': '...', 'mode_j': '...', 'mediar': '...', 'std_d': '...', 'system': { 'path': '...', 'exten': '...', 'file': '...', 'size': '...' }, 'image_test': '...', 'name_tags': '...', 'svm_class': '...', 'mean_color': '...' }
```

# ADAPTIVE BITRATE VIDEO STREAMING

- ▶ Divyashri Bhat, UMass Amherst
- ▶ Research: application header based traffic engineering using P4
- ▶ Testbed requirements:
  - ▶ Distributed testbed facility
  - ▶ BYOC – the ability to write an SDN controller specific to the experiment
  - ▶ Multiple connections between distributed sites
- ▶ <https://vimeo.com/297210055>

LCN'18: “Application-based QoS support with P4 and OpenFlow”

# BUILDING AN ECOSYSTEM

- ▶ Helping hardware providers interact
  - ▶ Bring Your Own Hardware (BYOH)
  - ▶ CHI-in-a-Box: deploy your own Chameleon site
- ▶ Helping scientists interact
  - ▶ Leveraging the common denominator
  - ▶ Integrating tools for experiment management
  - ▶ Making reproducibility easier
  - ▶ Facilitating sharing

# CHI-IN-A-BOX

- ▶ CHI-in-a-box: packaging a commodity-based testbed
- ▶ CHI-in-a-box scenarios
  - ▶ **Testbed extension:** join the Chameleon testbed: generalize and package + define operations models
  - ▶ **Part-time extension:** define and implement contribution models
  - ▶ **New testbed:** generalize policies
- ▶ Understanding the support cost model
- ▶ Available since Summer 2018
- ▶ **New Associate Site at Northwestern!**
  - ▶ Nodes with 100G network cards

# REPRODUCIBILITY DILEMMA

*Should I invest in making my experiments repeatable?*

*Should I invest in more new research instead?*

- ▶ **Reproducibility as side-effect:** lowering the cost of repeatable research
  - ▶ Example: Linux “history” command
  - ▶ From a meandering scientific process to a recipe
- ▶ **Reproducibility by default:** documenting the process via interactive papers

# REPEATABILITY MECHANISMS IN CHAMELEON

- ▶ Testbed versioning (collaboration with Grid'5000)
  - ▶ Based on representations and tools developed by G5K
  - ▶ >50 versions since public availability – and counting
  - ▶ Still working on: better firmware version management
- ▶ Appliance management
  - ▶ Configuration, versioning, publication
  - ▶ Appliance meta-data via the appliance catalog
  - ▶ Orchestration via OpenStack Heat
- ▶ Monitoring and logging
- ▶ **However... the user still has to keep track of this information**

# KEEPING TRACK OF EXPERIMENTS

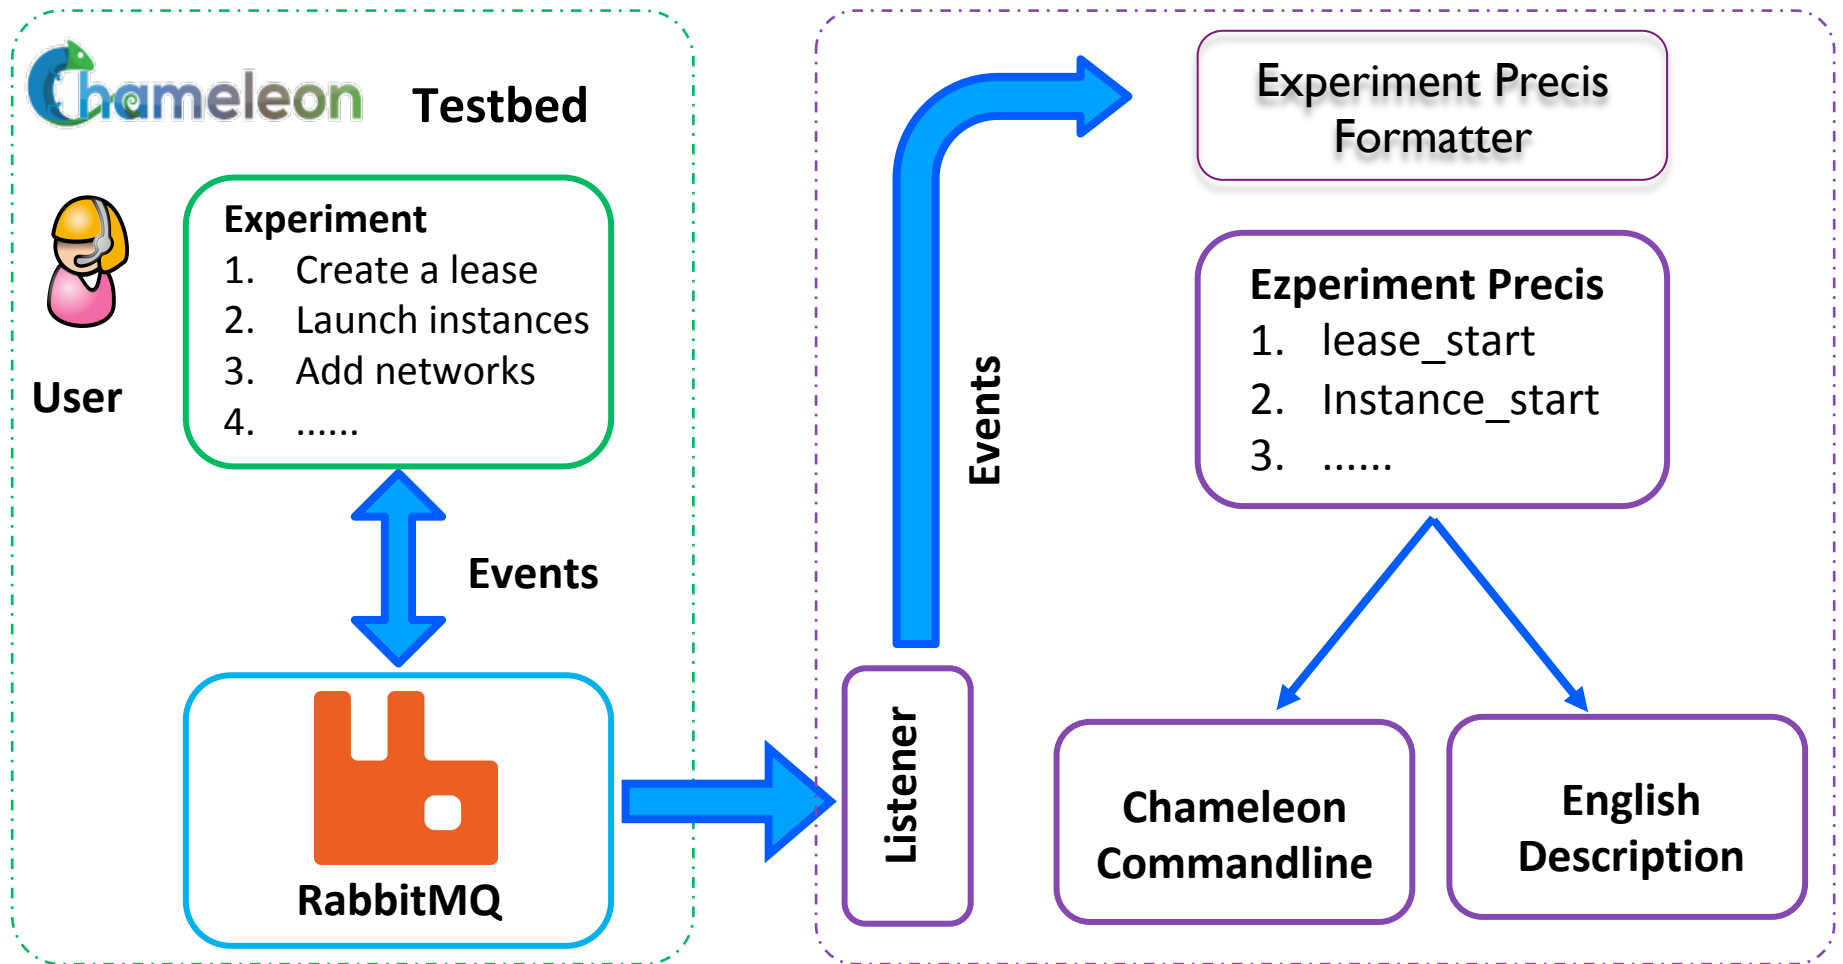

- ▶ Everything in a testbed is a recorded event
    - ▶ The resources you used
    - ▶ The appliance/image you deployed
    - ▶ The monitoring information your experiment generated
    - ▶ Plus any information you choose to share with us: e.g., “start power\_exp\_23” and “stop power\_exp\_23”
- 

- ▶ **Experiment précis:** information about your experiment made available in a “consumable” form

# REPEATABILITY: EXPERIMENT PRÉCIS

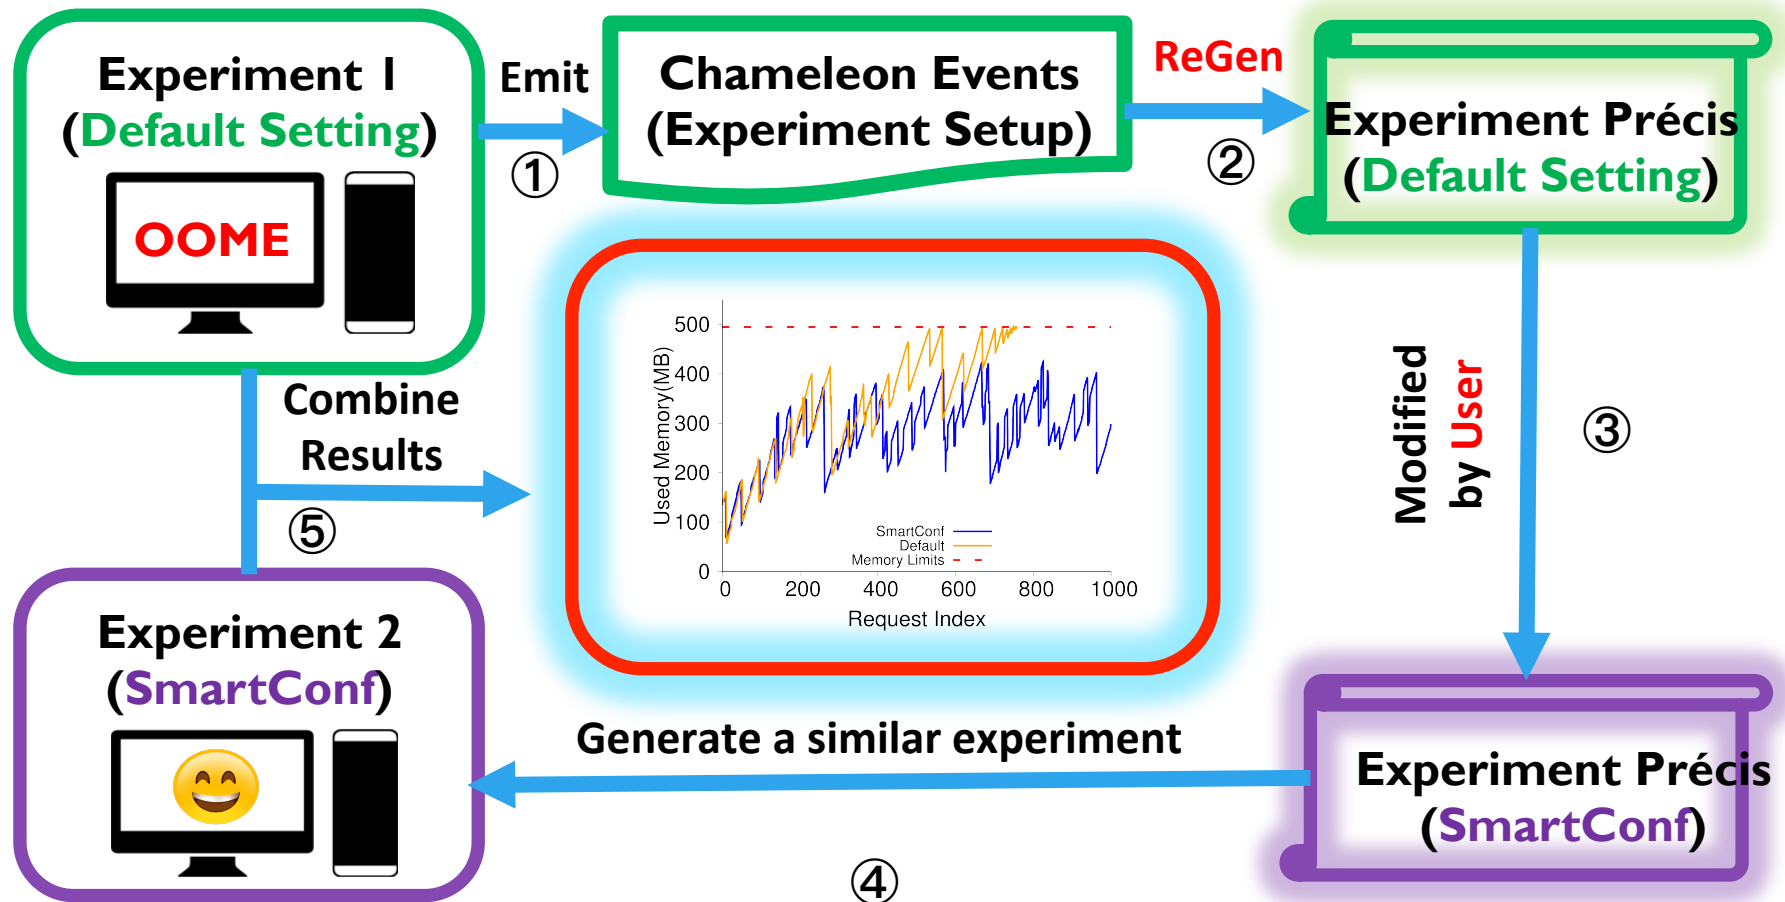

# EXPERIMENT PRÉCIS IMPLEMENTATION

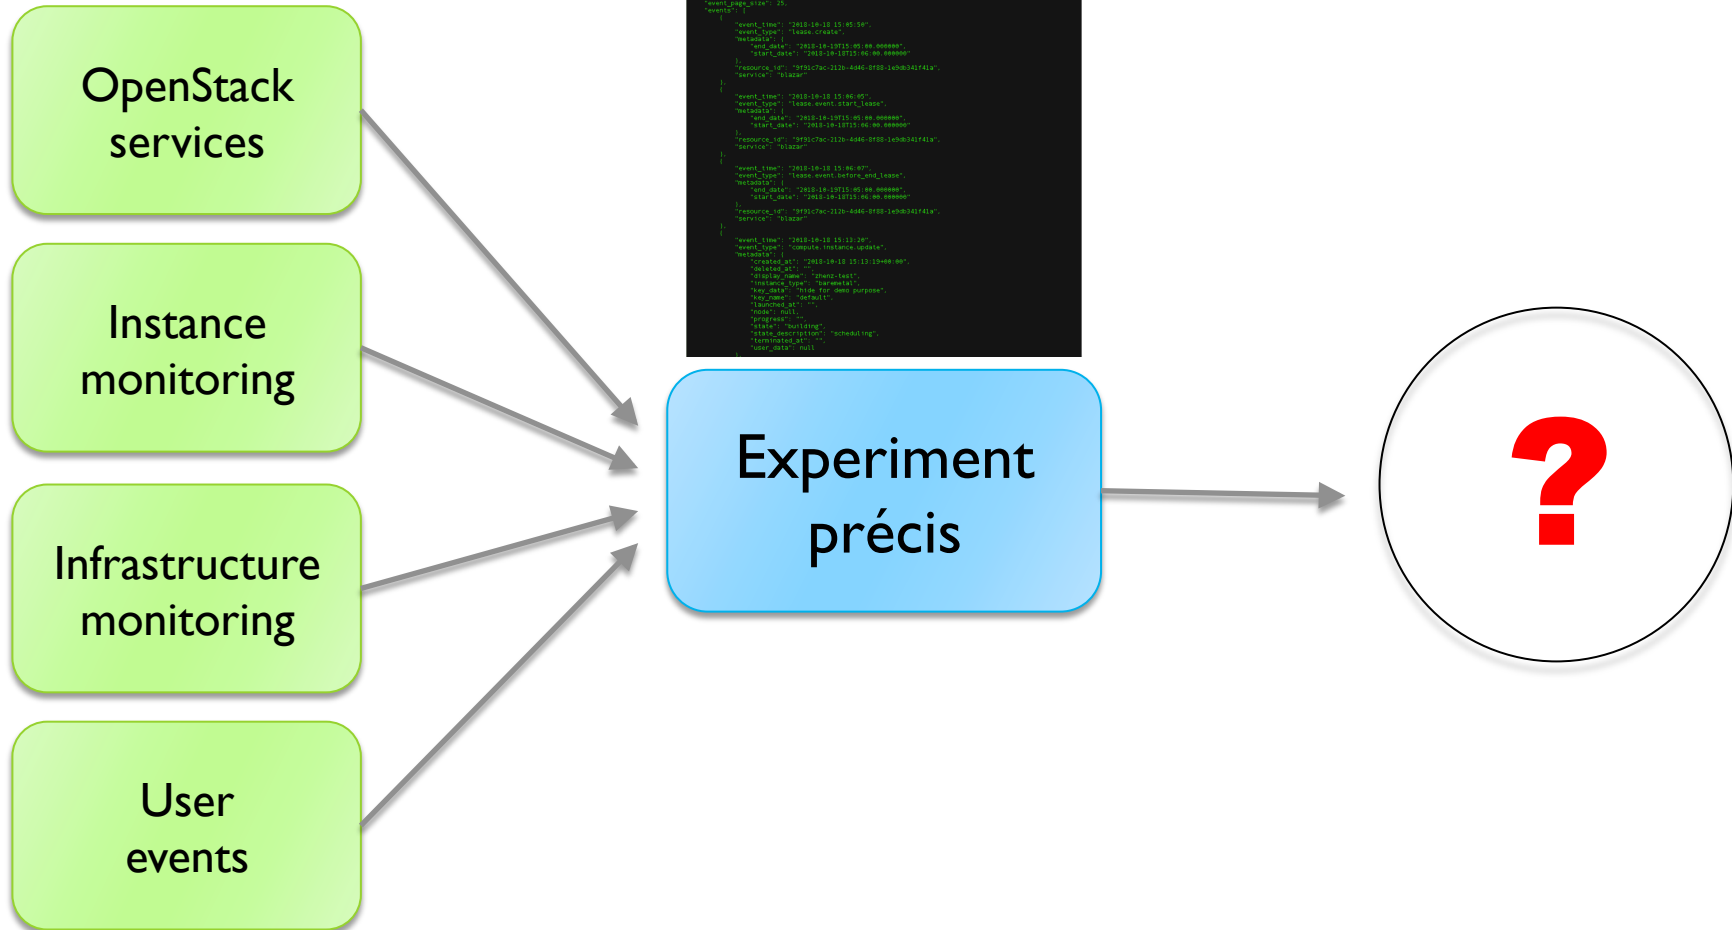

Come see our SCI8 poster: "Reproducibility as Side-Effect"

# EXPERIMENT PRÉCIS: A CASE STUDY

Based on Wang et al., Understanding and Auto-Adjusting Performance-Sensitive Configurations. ASPLOS, 2018

# REPEATABILITY: EXPERIMENT PRÉCIS

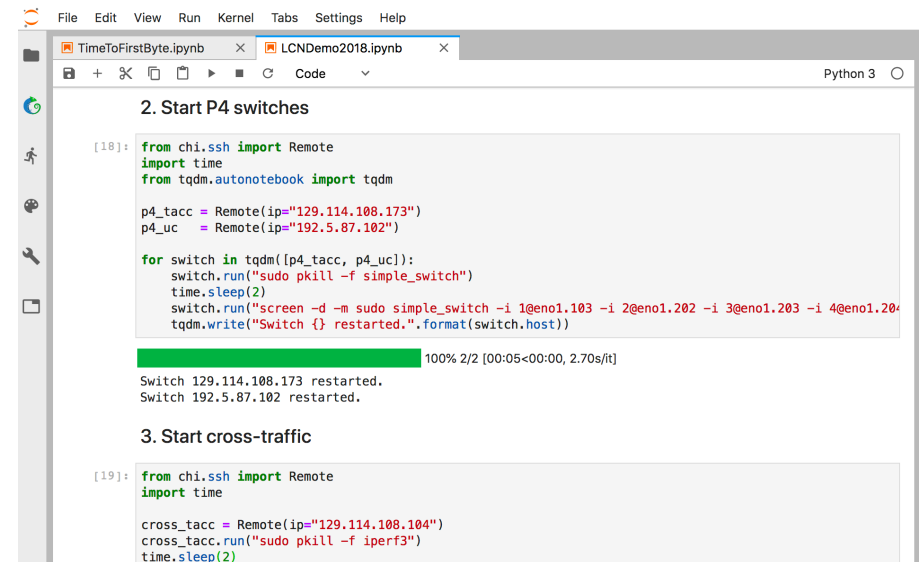

# ACTIVE PAPERS: WHAT DOES IT MEAN TO DOCUMENT A PROCESS?

- ▶ Requirements
  - ▶ Easy to work with: human readable/modifiable format
  - ▶ Integrates well with ALL aspects of experiment management
  - ▶ Bit by bit replay – allows for bit by bit modification (and introspection) as well – element of interactivity
  - ▶ Support story telling: allows you to explain your experiment design and methodology choices
  - ▶ Has a direct relationship to the actual paper that gets written
  - ▶ Can be version controlled
  - ▶ Sustainable, a popular open source choice
- ▶ Implementation options
  - ▶ Orchestrators: Heat, the dashboard, and OpenStack Flame
  - ▶ Notebooks: Jupyter, Nextjournal

# COMBINING THE EASE OF NOTEBOOKS AND THE POWER OF A SHARED PLATFORM

- ▶ Combining Jupyter with Chameleon
  - ▶ Storytelling with Jupyter: ideas/text, process/code, results
  - ▶ Chameleon shared experimental platform
- ▶ Chameleon/Jupyter integration
  - ▶ Alternative interface
  - ▶ All the main testbed functions
  - ▶ “Hello World” template
  - ▶ Save&share via object store and github integration
- ▶ Screencast of a complex experiment
  - ▶ <https://vimeo.com/297210055>

2. Start P4 switches
[18]: from chi.ssh import Remote
import time
from tqdm.autonotebook import tqdm

p4_tacc = Remote(ip="129.114.108.173")
p4_uc = Remote(ip="192.5.87.102")

for switch in tqdm([p4_tacc, p4_uc]):
    switch.run("sudo pkill -f simple_switch")
    time.sleep(2)
    switch.run("screen -d -m sudo simple_switch -i 1@eno1.103 -i 2@eno1.202 -i 3@eno1.203 -i 4@eno1.204")
    tqdm.write("Switch {} restarted.".format(switch.host))

100% 2/2 [00:05<00:00, 2.70s/it]
Switch 129.114.108.173 restarted.
Switch 192.5.87.102 restarted.

3. Start cross-traffic
[19]: from chi.ssh import Remote
import time

cross_tacc = Remote(ip="129.114.108.104")
cross_tacc.run("sudo pkill -f iperf3")
time.sleep(2)
```

# JUPYTER ON CHAMELEON

# PARTING THOUGHTS

- ▶ Physical environment: Chameleon is a rapidly evolving experimental platform
  - ▶ Originally: “Adapts to the needs of your experiment”
  - ▶ But also: “Adapts to the changing research frontier”
- ▶ Ecosystem: a meeting place of users sharing resources and research
  - ▶ Testbeds are more than just experimental platforms
  - ▶ Common/shared platform is a “common denominator” that can eliminate much complexity that goes into systematic experimentation, sharing, and reproducibility
